

Basement Leak Repair Kit

by Source One Environmental

S1E's Basement Repair Kit is an advantageous DIY kit for the homeowner or contractor looking to rehabilitate cracks in foundation walls. S1E's quality products, GreyCoat Epoxy and Hyperflex, work together to form a seal that is unlike anything on the market today. Whether your walls are leaking now or beginning to develop foundation issues, this kit can act as a long-lasting and reliable repair that will give you professional confidence.

The kit is designed to repair leaks in solid or poured concrete, stone and brick walls. While the kit can be applied on wet surfaces, it is recommended that the surrounding area be dry. Designed to repair up to a 10 ft. long crack.

Kit Includes:

- 2 Hyperflex tubes
- 1 GreyCoat two-part epoxy
- 14 injection ports
- 2 clear poly tubing
- 2 wooden mixing sticks
- 1 spreading spatula
- 2 pairs of disposable gloves
- 1 water bottle

Why GreyCoat Epoxy and Hyperflex?

SC-POX is a premium 100% solids epoxy that offers outstanding chemical resistance and lasting durability with adhesion to concrete substrates and metal surfaces. Prepackaged as a no mess coating system that offers extensive coverage and shrink resistance, SC-POX is excellent for structural spot repairs.

HyperFlex is a single component, pre-catalyzed hydrophobic polyurethane grout that has proven to be extremely versatile in a variety of infrastructure rehabilitation applications. Because of HyperFlex's slower reaction time, the material is able to travel further with better coverage to seal the leak and protect against future infiltrations.
