Safety Datasheet

Silicate Resin 3P W1 Express (Comp. B)

according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

1. Identification of the substance/mixture and of the company/undertaking

1.1 Product identifier

Fluvius Silicate Resin 3P Type W1 Express (Comp. B)

1.2 Relevant identified uses of the substance or mixture and uses advised against

“B” component for water glass - polyisocyanate based two-component synthetic resin. The synthetic resin (components “A”+“B”) is used for the lining of sewer pipes and manholes. The application has to be carried out under professional, industrial conditions by persons having proper previous training.

1.3 Details of the supplier of the safety data sheet

Company: Fluvius GmbH
Street/POB: Schiessstrasse 56
Postcode/City/Country: D-40549 Düsseldorf
Phone: +49 (0) 211-691 682-0
Telefax: +49 (0) 211-691 682-19
E-mail: info@fluvius.de

1.4 Emergency telephone number

Medical emergency information in case of intoxication
Giftinformationszentrum (GIZ) Mainz
Emergency telephone number: +49 (0) 6131 19240 (Advice in German or English)

2. Hazards identification

2.1 Classification of the substance or mixture

2.1.1 Classification according to Regulation (EC) No 1272/2008 (CLP)

<table>

Safety Datasheet

Silicate Resin 3P W1 Express (Comp. B)

according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

Precautionary statements

P260 Do not breathe dust/fume/gas/mist/vapours/spray.
P280 Wear protective gloves/protective clothing/eye protection/face protection.
P285 In case of inadequate ventilation wear respiratory protection.
P302+P352 IF ON SKIN: Wash with plenty of soap and water.
P304+P340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
P309+P311 IF exposed or if you feel unwell: Call a POISON CENTER or doctor/physician.

Hazard determining component(s) for labelling

Diphenylmethan diisocyanate, isomers and homologues (CAS: 9016-87-9); Tris(2-chloro-1-methylethyl) phosphate (CAS: 13674-84-5).

2.3 Other hazards

The mixture does not meet persistent (P) and bioaccumulation (B) criteria, but it meets the criteria for toxicity (T). The mixture is not PBT or vPvB.

3. Composition/information on ingredients

Mixtures / Chemical characterization

Name | EC-No. | CAS-No. | Content (%) | Classification according to Regulation (EG) No. 1272/2008 (CLP) | Hazard categories | H-phrase(s) |

1 See Section 16 for the full text of the abbreviations declared above.
2 Contains <25% 4,4’-MDI (4,4’-methylene diphenyl disocyanate) (CAS: 101-68-8).
3 01-219468772-26-XXXX
4 Contains cca. 10% 4,4’-MDI (4,4’-methylene diphenyl disocyanate) (CAS: 101-68-8).
5 No data.

Phone: 810-412-4740 · www.S1Eonline.com
4. First aid measures

4.1 Description of first aid measures

General advice: Soiled, fairly soaked clothing and shoes must be immediately removed.

In case of inhalation: If inhaled, remove to fresh air. If not breathing, give artificial respiration. Get medical attention immediately.

In case of skin contact: In the event of contact with the skin, preferably wash alternately with a cleanser based on polyethylene glycol and with plenty of warm water and soap. Consult a doctor in the event of a skin reaction. Wash the less clothing before reuse. Clean shoes thoroughly before reuse.

In case of eye contact: Hold the eyes open and rinse with water for a sufficiently long period of time (at least 10 minutes). Get medical attention immediately.

In case of ingestion: DO NOT induce the patient to vomit, medical advice is required. Never give anything by mouth to an unconscious person. Provided the patient is conscious, wash out mouth with water.

Information to physician: The product irritates the respiratory tract and may trigger sensitisation of the skin and respiratory tract. Treatment of acute irritation or bronchial constriction is primarily symptomatic. Following severe exposure the patient should be kept under medical review for at least 48 hours.

4.2 Most important symptoms and effects, both acute and delayed

Headache, nausea, shortness of breath, sore throat, redness on the skin. Repeated or prolonged contact may cause skin sensitization. Repeated or prolonged inhalation exposure may cause asthma.

4.3 Indication of any immediate medical attention and special treatment needed

Depending on the degree of exposure, periodic medical examination is suggested.

5. Firefighting measures

5.1 Extinguishing media

Suitable extinguishing media: Foam, CO₂ or dry powder. Water spray may be used if no other available and then in copious quantities.

Unsuitable extinguishing media: High volume water jet.

5.2 Special hazards arising from the substance or mixture

Carbon dioxide, carbon monoxide, hydrogen cyanide, nitrogen oxides, isocyanate. The substances/groups of substances mentioned can be released in case of fire.

5.3 Advice for firefighter

Reaction between water and hot isocyanate may be vigorous. Prevent washings from entering water courses, keep fire exposed containers cool by spraying with water.

Special protective equipment: Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode. Safety boots, gloves, safety helmet and protective clothing should be worn.

Further information: In the event of fire and/or explosion do not breathe fumes. Fire in vicinity poses risk of pressure build-up and rupture. Containers at risk from fire should be cooled with water and, if possible, removed from the danger area. Due to reaction with water producing CO₂ gas, a hazardous build-up of pressure could result if contaminated containers are re-sealed. Containers may burst if overheated.
Safety Datasheet

Silicate Resin 3P W1 Express (Comp. B) according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

6. Accidental release measures

6.1 Personal precautions, protective equipment and emergency procedures

Immediately contact emergency personnel. Evacuate the area. Keep upwind to avoid inhalation of vapours. Clean-up should only be performed by trained personnel. Keep unauthorized persons away.

For non-emergency personnel
Remove not affected people. Inform the relevant emergency services and authorities.

For emergency responders
People dealing with major spillages should wear full protective clothing including respiratory protection. Use suitable protective equipment.

6.2 Environmental precautions

Do not allow contaminated extinguishing water to enter the soil, ground-water or surface waters. Avoid dispersal of spill material and runoff and contact with drains and sewers.

6.3 Methods and material for containment and cleaning up

Absorb spillages onto sand, earth or any suitable adsorbent material. Leave to react for at least 30 minutes. Do not absorb onto sawdust or other combustible materials. Contaminated absorbent material shall be disposed according to Section 13. Wash the spillage area with water.

6.4 Reference to other sections

Information regarding exposure controls/personal protection and disposal considerations can be found in section 8 and 13.

7. Handling and storage

7.1 Precautions for safe handling

Protective measures

Provide sufficient air exchange and/or exhaust in work rooms. In all workplaces of the plant where high concentrations of isocyanate aerosols and/or vapours may be generated (e.g. during pressure release, mould venting or when cleaning mixing heads with an air blast), appropriately located exhaust ventilation must be provided in order to prevent occupational exposure limits from being exceeded. The air should be drawn away from the personnel handling the product. The efficiency of the ventilation system must be monitored regularly because of the possibility of blockage. Atmospheric concentrations should be minimised and kept as low as reasonably practicable below the occupational exposure limit.

Advice on general occupational hygiene

No eating, drinking, smoking or tobacco use at the place of work. Contact with skin and eyes and inhalation of vapours must be avoided under all circumstances. Keep equipment clean. A basic essential in sampling, handling and storage is the prevention of contact with water. Keep stocks of decontaminant readily available.

7.2 Conditions for safe storage, including any incompatibilities

Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials and food and drink. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabelled containers. Use appropriate containment to avoid environmental contamination. Suitable containers: steel, stainless steel. Unsuitable containers: copper, copper alloy and galvanised surfaces.

7.3 Specific end use(s)

For the relevant identified use(s) listed in Section 1 the advice mentioned in this section 7 is to be observed.
8. Exposure controls/personal protection

8.1 Control parameters

A workplace exposure level (WEL) of 0.02mg/m³ for total isocyanates (as NCO) as an 8 hour TWA, and a short term WEL (15 min) of 0.07 mg/m³ have been assigned in the United Kingdom. A BMGV for isocyanates, based on the measurement of urinary diamines, has been set at 1µmol diamine/mol creatinine.

(http://www.hse.gov.uk/foi/internalops/sectors/manuf/03-10-07.htm)

8.2 DNEL/PNEC-values

The risk characterization of MDI (CAS: 9016-87-9) is the following

Workers

Acute/short-term exposure
systemic effects (dermal) DNEL = 50 mg/kg bw/day

Acute/short-term exposure
systemic effects (inhalation) DNEL = 0,1mg/m³

Acute/short-term exposure
local effects (dermal) DNEL = 28,7 mg/cm²

Acute/short-term exposure
local effects (inhalation) DNEL = 0,1mg/m³

Long-term exposure
systemic effects (inhalation) DNEL = 0,05 mg/m³

Long-term exposure
systemic effects (dermal) Not applicable.

Long-term exposure
local effects (inhalation) DNEL = 0,05 mg/m³

Long-term exposure
local effects (dermal) Not applicable.

PNEC sediment
As PMDI is a reactant with water, access of water to PMDI and vice versa is strictly controlled. Furthermore, PMDI polymerizes in the presence of water and thus exposure of PMDI to sediment is highly likely to be negligible. Therefore, PNEC sediment cannot be derived for PMDI.

PNEC soil
1 mg/kg soil dw (dry weight)

PNEC oral
There are no data on effects of oral PMDI to birds. Exposure to birds is not expected and data from experimental animals show PMDI to be of low oral toxicity.

8.3 Exposure controls

Respiratory protection
Respiratory protection in case of vapour/aerosol release. Combination filter for gases/vapours of organic, inorganic, acid inorganic particles (e. g. EN 14387 Type ABEK) shall be used.

Hand protection
Chemical resistant protective gloves (EN 374).

Suitable materials also with prolonged, direct contact
(Recommended: Protective index 6, corresponding > 480 minutes of permeation time according to EN 747)

butyl rubber (butyl) 0,7 mm coating thickness
nitrile rubber (NBR) 0,4 mm coating thickness
chloroprene rubber (CR) 0,5 mm coating thickness

Unsuitable materials

polyvinylchloride (PVC) 0,7 mm coating thickness
Polyethylene-Laminate (PE-laminate) ca. 0,1 mm coating thickness

Eye protection
Safety glasses with side-shields (frame goggles) (e.g. EN 166)

Body protection
Safety shoes (e.g. according to EN 20346)

General safety and hygiene measures
Do not breathe vapour/spray. With products freshly manufactured from isocyanates body protection and chemical resistant protective gloves is recommended. Wearing of closed work clothing is required additionally to the stated personal protection equipment. No eating, drinking, smoking or tobacco use at the place of work. Take off immediately all contaminated clothing. Hands and/or face should be washed before breaks and at the end of the shift. At the end of the shift the skin should be cleaned and skin-care agents applied.

9.2 Other information

Not applicable.

10. Stability and reactivity

10.1 Reactivity

Reacts with water, acids, alcohols, amines, bases and oxidants.

10.2 Chemical stability

The main removal mechanism of MDIs in the environment is hydrolysis. MDI reacts quickly with water to form predominantly solid, insoluble polyureas. Under conditions typical of many types of environmental contact, i.e. with relatively poor dispersion of the isocyanate, the interfacial reaction leads to the formation of a solid crust encasing partially reacted product. This crust restricts ingress of water and egress of amine, and hence slows and modifies hydrolysis.

Stability in organic solvents

All MDI isomers and forms are highly unstable in dimethylsulphoxide solvent, water content of the DMSO is increasing breakdown. MDI is more stable in EGDE (ethyleneglycoldimethylether) as solvent.

(Read-across based on 4,4’-methylenebisphenyl diisocyanate - CAS 101-68-8.)

10.3 Possibility of hazardous reactions

Reaction is slow with cold or warm water (<50°C), with hot water or steam the reaction is faster, producing carbon-dioxide causing pressure increase. Acids, alcohols, amines, bases and oxidants cause fire and explosion hazard.

10.4 Conditions to avoid

High temperature, moisture, strong light.

10.5 Incompatible materials

Substances to avoid: acids, alcohols, amines, water, alkalines.

10.6 Hazardous decomposition products

No hazardous decomposition products if stored and handled as prescribed/indicated.
11. Toxicological information

Information is related to 4,4-Methyleneediphenylisocyanate if no other is mentioned.

11.1 Information on toxicological effects

11.1.1 Acute toxicity - oral

<table>
<thead>
<tr>

Silicate Resin 3P W1 Express (Comp. B)

Safety Datasheet

according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

Summarized the available animal data would not support classification of MDI as an eye irritant. But together with human occupational case reports in which symptoms of eye irritation were reported the legal classification as eye irritant should be applied.
11.7 STOT-single exposure
MDIs are irritant to the respiratory tract.

11.8 STOT-repeated exposure
Harmful
Rats (inhalation)
LOAEC = 1 mg/m² air
(2 years; 6 h/day, 5 days/week)
Target organs: respiratory - lung
OEC Guideline 453

11.9 Aspiration hazard
Not classified due to lack of data.

12. Ecological information
Information is related to 4,4-Methyleneedianifylisocyanate if no other is mentioned.

12.1 Toxicity
12.1.1 Aquatic toxicity

Short-term toxicity to fish
Freshwater fish (Brachydanio rerio) OECD Guideline 203

Fisch LC₅₀ = 56.2 mg/l (96 h)
Tris(2-chlor-1-methylethyl)phosphate (CAS-Number: 13674-84-5)

Long-term toxicity to fish
Data waiving. In accordance with column 2 of REACH Annex IX the long-term toxicity testing on fish shall be proposed if the chemical safety assessment according to Annex I indicates the need to investigate further the effects on aquatic organisms. The corresponding PEC/PNEC ratios would be less than 1. Taking into account the scientific and exposure arguments, it appears appropriate to waive the long-term fish/plant/soil and sediment toxicity studies.

Short-term toxicity to aquatic invertebrates
Freshwater invertebrates (Daphnia magna) OECD Guideline 202
EC₅₀ = 1000 mg/l (24 h)

Freshwater invertebrates (Daphnia magna) Tris(2-chlor-1-methylethyl)phosphate (CAS-Number: 13674-84-5)
EC₅₀ = 131 mg/l (48 h)

Long-term toxicity to aquatic invertebrates
Freshwater invertebrates (Daphnia magna) OECD Guideline 211
NOEC >= 10 mg/l (21 h)

Toxicity to aquatic algae and cyanobacteria
Freshwater algae (Desmodesmus subspicatus) OECD Guideline 201
EC₅₀ = 1640 mg/l (72 h)

Freshwater algae (Tris(2-chlor-1-methylethyl)phosphate (CAS-Number: 13674-84-5)
EC₅₀ = 82 mg/l (72 h)

Toxicity to aquatic plants other than algae
Data waiving. Not required by REACH annexes. However, a mesocosm study with PMDI exists in which the toxicity towards macrophytes (Potamogeton crispus and Zannichellia palustris) was assessed. No toxicity was observed at a loading of 1000 and 10,000 mg/l, approximately 100% of the substance was found in the sediment as hardened material.

Toxicity to microorganisms
Microorganisms (activated sludge) OECD Guideline 209
EC₅₀ >100 mg/l (3 h)

Toxicity to aquatic organisms
This information is not available, but not required under REACH.

12.1.2 Sediment toxicity
Data waiving. Annex X states that this study need not be conducted if the chemical safety assessment does not indicate a need to further investigate the effects on sediment organisms.
Silicate Resin 3P W1 Express (Comp. B) according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

12.1.3 Terrestrial toxicity

**Toxicity to soil macroorganisms except arthropods**

- *Eisenia fetida*: EC50 > 1000 mg/kg soil dw (14 days)
  - OECD Guideline 207

**Toxicity to terrestrial arthropods**

Data waiving. Based on the chemical safety assessment and the risk assessment, there is no need to further investigate the terrestrial arthropods toxicity as there is no risk for the terrestrial environment as indicated by the PEC/PNEC ratio being < 0.239. Direct/indirect exposure to soil is unlikely.

**Toxicity to terrestrial plants**

- *Avena sativa*: EC50 > 1000 mg/kg soil dw (14 days)
- *Lactuca sativa*: EC50 > 1000 mg/kg soil dw (14 days)
  - OECD Guideline 208

**Toxicity to soil microorganisms**

Data waiving. Annex X states that this study need not be conducted if the chemical safety assessment does not indicate a need to further investigate the effects on sediment organisms.

**Toxicity to other above-ground organisms**

Data waiving. Not required by REACH annexes.

12.1.4 Conclusion on classification

**Hazardous to the aquatic environment (acute)**

Based on available data, the classification criteria are not met. (EC/LC50 for fish, invertebrates and algae > 1000 mg/l)

**Hazardous to the aquatic environment (chronic)**

Based on available data, the classification criteria are not met. (NOEC for algae >1640 mg/L; NOEC for invertebrates > 10 mg/l).

12.2 Persistence and degradability

**Phototransformation in air**

- Half-life (DT50) 1 day

**Hydrolysis**

MDI reacts with water to form predominantly inert polyurea.

- Half-life (DT50) 20 h (at 25°C)
- Reaction rate hydrolysis 0.5-1 h
  - (Read-across based on Oligomer MDI - CAS 32055-14-4)

**Phototransformation in water and soil**

There are no phototransformation data in water and soil for the test substance.

**Biodegradation in water**

Under test conditions no biodegradation observed.
- (28 days) OECD Guideline 302C

**Biodegradation in water and sediment**

Data waiving. In accordance with Annex XI, simulation biodegradation tests are technically not feasible as the test substance reacts quickly with water. The corresponding PEC/PNEC ratios would be less than 1. Taking into account the scientific and exposure arguments, it appears appropriate to waive the long-term fish/plant/soil and sediment toxicity studies.

**Biodegradation in soil**

Data waiving. See at Biodegradation in water and sediment.

12.3 Bioaccumulative potential

**Bioaccumulation - aquatic/sediment:** Due to the high reactivity of the substances of the MDI category with water, bioaccumulation tests can in principle not be performed with these substances. However, one bioaccumulation test with 4,4' MDI and a mesocosm study with PMDI with an indication of bioaccumulation potential have been performed. As no analytical measurements were done, it cannot be determined if the values are truly related to MDI. However, based on the available information and the reactivity of MDI substances of the category approach, no new bioaccumulation study is deemed necessary.
Silicate Resin 3P W1 Express (Comp. B)

according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

12.4 Mobility in soil

- **Adsorption/desorption**
  - Data waiving. According to Annex VIII the study need not be done if the test substance degrades rapidly. The corresponding PEC/PNEC ratios would be less than 1. Taking into account the scientific and exposure arguments, it appears appropriate to waive the long-term fish/plant/soil and sediment toxicity studies.

- **Volatilisation**
  - The estimated Henry’s Law Constant, calculated from the measured vapour pressure and the calculated water solubility, is \(2.263 \times 10^{-7}\) atm-m³/mole. Hence, volatilization is unlikely to be a significant removal mechanism for MDI substances of the category approach.

12.5 Results of PBT and vPvB assessment

**Conclusion for the P criterion**

The results from the biodegradation test indicate that PMDI is not biodegradable. Based on experimental hydrolysis and indirect photolysis half-lives, PMDI is not considered to be persistent in the environment and is identified as not P. Based on the justification in the category approach, it is assumed that all MDI analogues included in the category are not P.

**Conclusion for the B criterion**

Although MDI has a high measured \(\text{Log Pow}\) value (4.51), a full bioaccumulation test with 4,4’-MDI indicated that the bioaccumulation potential is low. Due to the fast hydrolysis, exposure of the environment to the substance is unlikely or very low, there is no potential for significant bioaccumulation possible. Hence, 4,4’-MDI does not fulfill the requirements for the B criterion and is not identified as B. Based on the justification in the category approach, it is assumed that all MDI analogues included in the category are not B.

**Conclusion for the T criterion**

The concentrations tested were far above the water solubility of the MDI substances (7.5 mg/l). However, the water solubility limit of MDI is far above the criteria for T and on the basis of aquatic toxicity tests MDI is identified as not T. However, according to Annex I of 67/548/EEC MDI is classified as Xn, R48, which automatically triggers a T. Based on this classification MDI is identified as T.

12.6 Other adverse effects

- It is not expected that substance has an effect on global warming, ozone depletion in the stratosphere or ozone formation in the troposphere.

- Secondary poisoning: Based on the available information, there is no indication of a bioaccumulation potential and, hence, secondary poisoning is not considered relevant.

- Exposure to birds is not expected and data from experimental animals show MDI to be of low oral toxicity.

13. Disposal considerations

13.1 Waste treatment methods

The products becoming useless and the contaminated containers not suitable for product storage must be handled as hazardous waste in accordance with EU and regional hazardous waste regulations.

**European Waste Catalogue code**

08 05 01

13.1.1 Product / Packaging disposal

Contaminated packaging should be emptied as far as possible; than it can be passed on for recycling after being thoroughly cleaned. Wrappings cleaned from contamination with suitable cleaning process (e.g. by steaming, treating with washing fluid, etc.) must be considered as non hazardous waste.

13.1.2 Waste treatment options

Incinerate in suitable incineration plant, observing local authority regulations.
Silicate Resin
3P W1
Express (Comp. B)

according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

14. Transport information

Land transport (ADR/RID/GGVSE)
Sea transport (IMDG-Code/GGVSee)
Air transport (ICAO-IATA/DGR)

14.1 UN number
Not dangerous goods.

14.2 UN proper shipping name
Not dangerous goods.

14.3 Transport hazard class(es)
Not dangerous goods.

14.4 Packaging group
Not dangerous goods.

14.5 Environmental hazards
Marine pollutant: no

14.6 Special precautions for users
EmS number: Not dangerous goods.

14.7 Transport in bulk according to Annex II of MARPOL73/78 and the IBC Code
Not relevant.

15. Regulatory information

15.1 Safety, health and environmental regulations/legislations specific for the substance or mixture

Information regarding relevant Community safety, health and environmental provisions:

ISOPA, the European Diisocyanate & Polyol Producers Association has elaborated a Guideline document for the safe treatment of MDI containing products. The Guidelines have been built into this data sheet.

15.2 Chemical Safety Assessment

In accordance with REACH Chemical Safety Assessment has not been carried out for the product. However, the results from the CSA for 4,4'-MDI were transposed into this SDS.

16. Other information

The information given corresponds with our actual knowledge and experience. This information is meant to describe our product in view of possible safety requirements. Classification of the mixture is based on the classification of components.

16.1 Indication of changes

Due to the transition to the classification according to CLP, the safety data sheet shall be regarded as fully new.

16.2 Abbreviations and acronyms

bw: bodyweight
CAS number: Chemical Abstracts Service number.
CLP: Regulation on classification, labelling and packaging.
DNEL: Derived no effect level.
dw: dry weight
EC number: EINECS and ELINCS number.
EC50: Half maximal effective concentration.
EINECS: European Inventory of Existing Commercial Chemical Substances.
ELINCS: European List of Notified Chemical Substances.
LC50: Lethal concentration, 50%.
LD50: Median Lethal dose.
LOAEC: Lowest Observed Adverse Effect Concentration.
NOAEC: No Observed Adverse Effect Concentration.
NOAEL: No Observed Adverse Effect Level.
NOEC: No Observed Effect Concentration.
OECD: Organisation for Economic Cooperation and Development.
PBT: Persistent, Bioaccumulative and Toxic.

Silicate Resin
3P W1
Express (Comp. B)

according to Regulation (EC) No. 1907/2006 and Regulation (EU) 2015/830

Polymeric MDI
Polymeric MDI
Polyethylene polyphenyl poliisocyanate.

PEC
Predicted Environmental Concentration.
PNEC
Predicted No Effect Concentration.
REACH
The Registration, Evaluation, Authorisa-

tion and Restriction of Chemicals.
vPvB
Very Persistent and Very Bioaccumulative.

16.3 Key literature references and sources for data

safety data sheets, received from the raw materials suppliers.

16.4 Full text of abbreviations

H- Phrases
H302
Harmful if swallowed.
H315
Causes skin irritation.
H317
May cause an allergic skin reaction.
H319
Causes serious eye irritation.
H332
Harmful if inhaled.
H334
May cause allergy or asthma symptoms or breathing difficulties if inhaled.
H335
May cause respiratory irritation.
H351
Suspected of causing cancer.
H373
May cause damage to organs through prolonged or repeated exposure: respiratory system, inhalation.

P- Phrases
P260
Do not breathe dust/fume/gas/mist/vapours/spray.
P280
Wear protective gloves/protective clothing/eye protection/face protection.
P285
In case of inadequate ventilation wear respiratory protection.
P302+P352
IF ON SKIN: Wash with plenty of soap and water.
P304+P340
IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
P309+P311
IF exposed or if you feel unwell: Call a POISON CENTER or doctor/physician.

Hazard classes
Acute Tox.
Acute Toxicity
Carc.
Carcinogenity
Eye Irrit.
Serious eye irritation
Resp. Sens.
Respiratory sensitization
Skin Irrit.
Skin irritation
Skin Sens.
Skin sensitization
STOT RE
Specific target organ toxicity - repeated exposure
STOT SE
Specific target organ toxicity - single exposure
