Understanding Your Choices for Residential Sewer Pipe Repair.

Call us today to see if PipePatch is the solution to your sewer problem.

Residential Sewer Problems

Everything that goes down the drain in your home flows to either the sewer main or your septic field. Your sewer pipe can be 6 to 15 feet below ground.

Over the years, your pipes may have been subject to infiltration by roots and water. Settling pipes can become broken, separated, and possibly collapsed resulting in slow drains, unhealthy sewer backups, or even a saturated low spot in your lawn.

Lateral sewer pipe leaving your home.

The Premier No Dig Pipe Repair System.
Residential Sewer Repairs Without Digging Up Your Lawn.

Tree Roots Filling Pipe

Broken / Missing Pipe

Separated / Offset Pipe

Out to municipal sewer or septic field.

The PipePatch system is installed internally and repairs pipes damaged due to corrosion, cracks, joint separations, and root and water infiltration regardless of the pipe age or material.

The No Dig Alternative:
- Little to no disruption to your daily routine
- Eliminates the need for disruptive and time consuming excavation
- Repairs can be made any time of year – even under frozen ground

A Permanent Solution:
- Permanent repair that is stronger than the original pipe and is not affected by household oils or chemicals
- No toxic fumes in your home – PipePatch is odorless and safe for indoor use
- Creates a structural repair

Additional Applications:
- Close off unwanted connections
- Create pipe where original pipe is missing
- Smooth the transition of offset pipes
- Home, Commercial, Hospitals, Airports, etc.
